

## Manual ActivCard

### First Step

1. Press 'OK'. Display shows 'ENTER PIN'
2. Enter the PIN 1254 and hit 'OK'
3. Display shows 'NEW PIN'
4. Enter a new pin (4 – 6 digits) and hit 'OK'. Display now shows 'CONFIRM'. Enter your PIN once more for confirmation, please
5. Enter the new PIN code again and press the 'OK' button. The display reads 'COMPLETE'. Your PIN code has now been changed.

Then appears in the display, 8 digit number, this is the ActivCard number (token number).

### Important Notes

For improved security, you cannot use a weak PIN code – one where the distance between subsequent digits is a constant value. For example, 0000, 1234, and 9753 are weak PIN codes while 1243, 1256, and 9371 are strong and therefore authorized PIN codes.

The ActivCard is employed for the strong authentication of the user. Every minute, a new individual number for your ActivCard is generated via a mathematical algorithm which is synchronised with our server. In addition, your ActivCard is protected by a PIN code which you may change yourself.
